## Description

Hanseline Carbon Mounting Paste (CMP) is a mounting paste, which increases the friction and thus lowers the necessary torque force. It is water-repellent and free of solvents. Prevents corrosive wear (seizing) of aluminium and metals.

## Usage

Hanseline CMP is applied thinly on seat post or handlebar / stem. Due to hard particles the friction is increased, the paste works as carrier and serves as protection against corrosion.

The increased friction by solid particles allows to work with a lower torque force at the same stability. At the same time the carrier material works as protection against corrosion and prevents corrosive wear or seizing of the components by its separating properties. The paste is suitable for all combinations of carbon, aluminium and steel – especially approved for mounting carbon parts among each other.

Where to use: seat post, handle bar, derailleur, ...

## Technical Data

form:	paste-like	
color:	light brown	
odour:	characteristic	
Density at 15°C	860 kg/m <sup>3</sup>	DIN 51757
Flashpoint	>250° C	DIN ISO 2592
Pourpoint	162° C	DIN ISO 3016
